## AmiBroker Professional

### Version 5.20

AmiBroker is an award-winning, real-time analysis platform for stocks, futures, mutual funds, and forex.

Designed for experienced individual as well as professional investors, looking for a reliable system trading tool, AmiBroker delivers advanced charting, high-speed portfolio-level backtesting, optimization, user-defined alerts, and programmable indicators in a single, powerful, yet affordable platform.

AmiBroker's own flexible programming language (AFL) is easy to learn, and makes programming quick and straightforward. Thanks to array-based processing its speed can be compared to the speed of native machine code. The users without any programming experience can use the AFL Code Wizard that can transform plain english sentences into the code automatically.

The main strength of AmiBroker is rapid prototyping, design and validation of trading systems. Its efficient use of hardware resources makes it possible to perform tests that are outside the reach of other testing tools.

Sequential tests and optimizations can be automated by either built-in walk-forward test module, or by external script thanks to AmiBroker's OLE automation support.

Version 5.20 has been expanded to offer unique features and meet the needs of today's more demanding investors and traders. Because of AmiBroker's unparalleled customer support, it includes many features requested by a rapidly growing user group.

Some of the most important additions are: sophisticated intelligent non-exhaustive optimization algorithms, support for market-neutral portfolio trading systems, multiple-segment volume-at-price (market profile) charts, floating windows, the code profiler.

AmiBroker also offers extensive set of multiple time-frame functions, fundamental data support, formula-based alerts, and a unique composite function allowing creation of multiple-security indicators in seconds.

AmiBroker is an ideal choice for individual investors as well as professionals, combining power, speed, and flexibility, and providing the most comprehensive set of tools at a very affordable price.
